

Bag Compactor

Simplified, efficient solutions for managing empty bags

Total dust containment when attached to HSPL sack tip station with dust collection system

Eliminate the constant clean-ups from empty bags

Minimizes clean-ups during work shifts.

Contain the dust while eliminating the time wasted in bag disposal/handling and the constant clean-ups that are usually required due to spilled material.

Protects your employees.

When you use a compactor in conjunction with a dust control /sack tip station, your employees' exposure to dangerous dust is minimized. And, the system has safety interlocks to provide further protection from operational injuries.

Simplified sack disposal.

The compactors removable container holds a disposable plastic liner in which waste sacks are accumulated for easy removal and handling.

Air operated.

All controls on this unit are air logic operated, making it safe for explosion-proof or wash-down areas.

Space saving. Unit is available in a standalone model or can be tied in with a HSPL sack tip/dust collector.

Engineered to fit your needs. Units are available in painted carbon steel or stainless steel.
