

Pneumatic Conveyors

Innovative ideas reduce maintenance and boost filter efficiency

Boost filter life and efficiency with our reverse-pulse jet filter cleaner

Reduce time of filter changes using the side-access door, always standard on HSPL's pneumatic conveyors

Save money on plant air. Our pneumatic conveyor comes complete with an integral blower, eliminating the need for expensive plant air or a separate compressor.

Increases operating efficiency. HSPL's regenerative blower provides high conveying efficiency.

Lengthens filter life and maximizes performance. Our pneumatic conveyor has a standard reverse-pulse filter cleaning system that keeps the filter clean and at optimum operating efficiency.

Offers simple in-plant installation. The compact and integral blower (eliminating the need for air piping) makes installation easy.

Clean the unit easily, especially when changing over to a new material. Fully discharges material; reverse-pulse filter cleaner ensures no material is left behind.

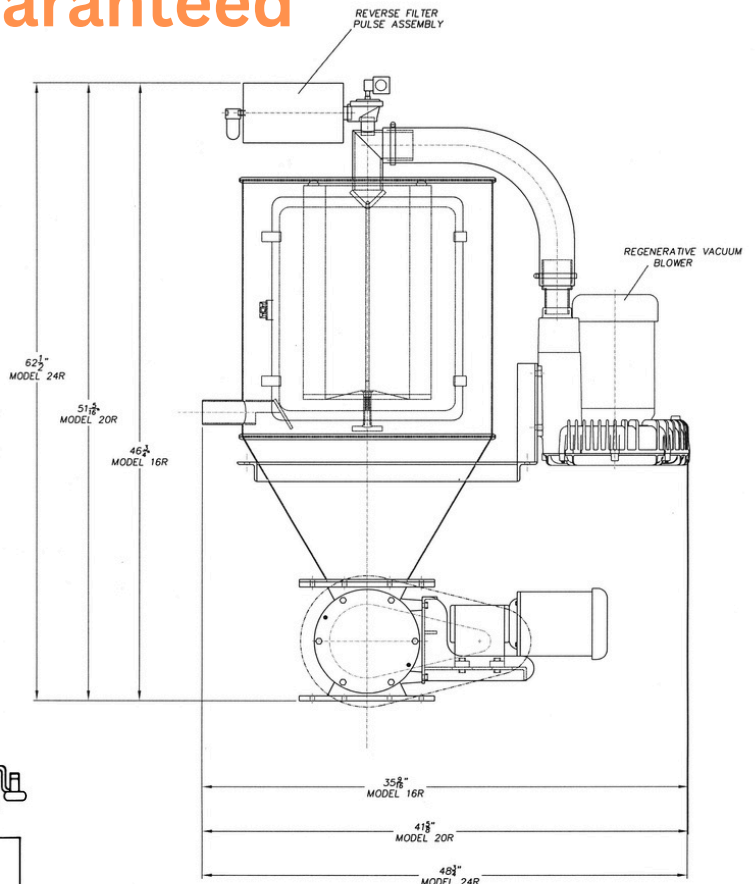

Meet your specific requirements. HSPL'S flexibility in engineering capacity and designs - even portable units - ensure your needs are met exactly.
